KDAT

KILN-DRIED AFTER TREATMENT

The controlled process of drying material after treating it with borates or MicroPro™ provides numerous benefits:

- Minimizes shrinkage problems
- Makes the material cleaner and lighter
- Gives the material greater strength and stiffness
- Material has better nail holding capacity
- Material is more uniform in size
- Reduces warping
- Appearance is enhanced

Controlling the moisture content of wood provides a safe, clean, and durable building material which is easier to use and better performing.
